

UNILABS INTERNSHIP

Summer Scholar Programme

Departments Covered

Serology

Microbiology

Histopathology

Hematology

Phlebotomy

Pre Analytics

Overview:

Having headquarters established in the UK and Switzerland Unilabs, are one of the leading laboratories for diagnosing, pre-analytics and research orientated work. I was lucky enough to have the opportunity to work in their central lab here in Dubai for 5 weeks.

LEARNINGS

This internship taught me a lot, from not only introducing me to most of the courses that I would be undertaking in year 2 but also showed me a new perspective to the medical world in terms of treatment of patient. I learnt the importance and the need of laboratories in the medical field and how they play a very pivotal role in providing beneficence to our patients. I loved the histopathology and phlebotomy + Hematology departments, simply because of the sheer effort and processes that need to be in place to attain a valid result for the patient. I felt like a family member for the 5 weeks as every instructor showed out of their pure enthusiasm how much they cared about spreading knowledge and promote the unseen side of the medical field.

CERTIFICATE SUMMARY

Overall, I would say it was worth the experience and makes me feel quite comfortable in terms of the initial stages of year 2 courses and it's contents. Would recommend Unilabs to any of my colleagues for future.

Thank you MBRU for giving us this unforgettable opportunity

Name - Om Aditya Nandana Ram Prathikantam

Supervisor Name - Dr Meenakshi Jain (Lab Director)
